AMPHIOTIK ENHANCER stands for AMPHIOTIK Tech. Enhanced Sound Technology. In the standard edition the channels of your tracks are placed in an automated and customizable 3D virtual environment. Playing with individualized immersion sounds pleasant and realistic. AMPHIOTIK ENHANCER is the result of a long research period, in which the most important standards of 3D-audio technology were tested, combined with a detailed analysis of the hearing of humans. One of the challenges of the audiophile community is to find a way to play music in a satisfactory manner. In the 3D-audio environment the active stereo image is accurate, and as the music seems to come from a certain direction in relation to the listener. The originality of AMPHIOTIK ENHANCER compared to other conventional 3D-audio systems is found in that the active stereo image is simulated, thereby creating the illusion that the sound is coming from a certain location. If you use your PC for a long time, the default panning setting will not be ideal. In such cases, it is advisable to assign a different location manually to the desired virtual sound source. The headset or the monitor can be used to achieve this purpose. Special thanks to Herman Van den Bosch, composer and music producer, who made great contributions to the development of AMPHIOTIK ENHANCER and AMPHIOTIK TECHNOLOGY. X-Split 5 adds support for the new plugin type in X-Rite's V-Line. The new V-Line plugins are such luminance/luminosity adjustment plugins that are designed to analyze and adjust a given subject on the basis of its luminance components. The new plugin type is based on the new V-Line hardware and software as well as the new calibration files for the new hardware. With the new plugin type, you can adjust the luminance and the luminosity of any color of an object. This plugin type uses the five-channel V-Line software from X-Rite and the new V-Line calibration files for the new RGB-D sensor. With X-Split 5, you can now assign new subjects. You can choose a preconfigured subject list in the Application Settings in the new V-Line View (panel on the left in the V-Line View). Furthermore, the RGB-D alignment tools can be used to align the calibration object and the subject. With the lumin

AMPHIOTIK ENHANCER ST is a powerful 3D-Audio system, for novice and intermediate users, which processes standard stereo audio and converts it into an enhanced, rich 3D stereo output, increasing dramatically the listening experience. In the STandard edition, you can place the channels of your tracks in a fully customizable 3D Virtual Auditory Environment surrounding you, and experience a complete immersion. AMPHIOTIK ENHANCER is based on AMPHIOTIK TECHNOLOGY, which in turn is based on Binaural Technology. Binaural processing is based on HRTFs technique. Virtual Worlds: The virtual environment is represented by the means of 3D-Graphics. New "worlds" can be generated and the dimensions of the world and the materials of the surfaces can be freely adjusted. Sound Field Model: SFM is simulated by the means of Image Source Method (ISM) for the early reflections, in combination with reverberation algorithms for the simulation of the late part. Ultimate control over the sound field is allowed, by selecting the material, and thus the absorption coefficients, of each surface. Virtual Sound Sources: There are five virtual sound sources, which are dynamically linked to the channels of the stereo input. Positioning - 3D/2D View: Arbitrary positioning of the virtual sound sources and the virtual listener. Listening over Headphones: When listening over headphones, the sound image is externalized out of the head. Listening over Loudspeakers: Transaural-Audio - When listening over loudspeakers, standard stereo makes the sound come from between the two speakers in front of the listener. Transaural-Audio extends the sound field beyond the separation of the loudspeakers and the sound surrounds the listener. Arbitrary positioning of the loudspeakers is allowed in the horizontal plane. Materials Absorption: Store the appearance and the absorption coefficients of materials. Post equalization, Automatic Gain Control and more. VST Compatibility: Windows Vista/XP/2000/98/95/NT/ME/2000/XP X86 Amplifier: Description: AMPLIFIER is a free software for Windows, allowing to manipulate amplifiers and filters, to increase or decrease gain or create filters.
