Hughes is calling for reforms that will include a "rigid hiring commitment," which means that companies would need to ensure that their workers don't need to leave to take a job elsewhere — and wouldn't just look for people whose qualifications and experience will make them suitable for the job. The Fed's paper also includes a number of fixes to make the labor supply, which currently exists on a "flat basis," more responsive.. The Federal Reserve seems to have finally recognized that the biggest reason that the country's economy has fallen flat is simply incompetence. In a new paper at the New York Fed, the Fed's deputy chair, Charles Evans Hughes — who is probably best known for being in charge of the Federal Reserve after the 1980–83 stock market crash — calls for structural changes to revive job creation and economic growth. The report is called "The Challenge and Prospects for the US Jobs Outlook in 2016," and it offers a couple of sobering warnings about what the country might have in store for the future.. our economic ills, the worst is probably unemployment — and it seems to be going up, just like it has for the last several years. The Fed's goal is to get America out of its long-term slump by boosting the economy so that it should reach full employment by the end of 2015. But the U.S. is facing an economic recession of magnitude three (or more; it depends on what the Fed wants to know) by 2016, and while it's hard to say if it's going to just slide through the floor at that point, it is certain that unemployment won't return to near its 1999 peak as the authors predict it will. So the question is: can the United States finally start picking up where its past success has left off? That depends on who's right, https://www.jetbrains.com/download..
